UNITED STATES STANDARDS REQUIRE DOCKAGE FOR SMUT ON WHEAT

1. Stinking Smut causes a loss of 5 per cent of the wheat heads in the average Michigan field. It costs the state more than a million dollars annually.
2. This year, grain inspectors are required by law to dock for the Smut that is present and to charge for washing and cleaning. The Smutty bushel is worth about 15 cents less than the clean bushel.
3. There is only one thing to do and that is to

Treat Every Bushel of Michigan Seed Wheat

The pictures tell the whole story of the New Concentrated Formaldehyde
Method of Grain Treatment.

FAN THE WHEAT THOROUGHLY TO BLOW OUT SMUT BALLS.

Use concentrated formaldehyde. 1 pint treats 50 bushels. Spray the grain while shoveling it from one pile to another, just as you mix concrete.

Cover exactly 4 hours. Then spread and air thoroughly. The grain is dry and ready to plant at once. Disinfect the drill.

THIS TREATMENT APPLIES EQUALLY WELL TO RYE. USE IT FOR OATS NEXT SPRING.

FOOD PREPAREDNESS COMMITTEE
LANSING, MICHIGAN.
